Location: Bangalore, India

SUMMARY Backend Engineer with 3+ years experience building distributed systems at scale. Expertise in Java, Go, Spring Boot, Kubernetes, and cloud infrastructure. Track record of 200x query performance gains, 5B+ CDC pipeline throughput, and zero-downtime migrations.

SKILLS Languages: Java, Go, Kotlin, Python, JavaScript, SQL, Bash Backend Frameworks: Spring Boot, Gin, Express.js, REST/GraphQL APIs DevOps & Cloud: Docker, Kubernetes, GitHub Actions, CI/CD, GCP, AWS, Helm, Prometheus/Grafana/Loki Databases: MySQL, PostgreSQL, MongoDB, ClickHouse, Firebase Testing: JUnit, Mockito, UIAutomator

EXPERIENCE BrowserStack — SDE Backend (Apr 2025 – Present) Mumbai, India • Shipped enterprise RBAC access-control system (roles, hierarchies, 14 check-points) for 50k+ enterprise customers • Delivered multi-language SDK support across 5B+ API calls via client-aware routing • Built CDC pipeline from MySQL to ClickHouse for 10TB database, 5B+ inserts/updates, 35 Debezium connectors across 4 regions • Launched Australia AWS region (GRR/GDPR), handling 360K requests/hour • Halved per-session auth calls (2→1), cutting 102K auth calls/day • 208× query speedup (9.6s → 46ms) on 524M-row table via zero-downtime schema migrations across 4 regions • Cut dashboard load 4min → 3s by indexing high-cardinality queries • Executed zero-downtime PK migrations on 3 tables of 1B+ rows (~1TB, 2.9M rows/day) • Offloaded heavy aggregates from MySQL to ClickHouse, stabilizing CPU from 96% • Remediated SQL injection across 200+ APIs, shipped Static CI security scanning (~98% traffic) • Resolved 2 critical vulnerabilities (RCE, SSRF bypass), enabled TLS for database connections

Zus (formerly Ochain) — SDE Backend Freelance (Apr 2024 – Mar 2025) Cupertino, CA (Remote) • Spearheaded UAT test suite for enterprise storage, reducing production bugs by 90% • Refactored GoSDK, reducing app size by 50% • Benchmarked S3-compatible storage for 500M bulk files and 40TB large files, sub-100ms latency • Developed automated workflows for view change, boosting developer efficiency by 90% • Built automated alert system for missing network blocks with Slack integration

Zus (formerly Ochain) — Android Engineer Freelance (Feb 2022 – Mar 2024) Cupertino, CA (Remote) • Architected two Android apps (Bolt crypto wallet, Vult decentralized storage), 20% user base increase • Led and mentored 2 junior developers, 40% code quality improvement, 95% on-time delivery • Designed release pipelines reducing manual effort 70% • Developed Split Key Functionality for double-signing transactions via Bluetooth

Google Summer of Code — Oppia Foundation (Jun 2021 – Sept 2022) Remote • Designed CI/CD infrastructure for Android builds • Implemented automated

build triggers for alpha/beta/test releases • Engineered automated logging system tracking builds/releases

EDUCATION Indian Institute of Information Technology, Lucknow Bachelor of Information Technology, CGPA: 8.32/10 Apr 2020 – Apr 2024

PROJECTS Parking Lot Management System (Node.js, Express.js, MongoDB, Winston, Jest) <https://github.com/yash10019coder/ParkingLotBackend> • RESTful API for parking space management with logging and testing

Airline Ticketing System (Spring Boot, Java, Docker) <https://github.com/yash10019coder/airline-ticketing-system> • MVC architecture for booking, querying, canceling tickets

Trip Feedback System (Spring Framework, Java) <https://github.com/yash10019coder/TravelSpringBoot> • Secure feedback submission with user authentication

ACHIEVEMENTS • 700+ DSA Problems Solved on LeetCode • Oppia Foundation Member (2 years) • 30 Days of Google Cloud Program Completed
